

## ARGENTINA

### Calculations<sup>1</sup>

Argentina's military expenditures are 8% of its GDP.

While ranking 53<sup>rd</sup> amongst highest national military budgets, with this money, the government could

- Cover the costs of ½ year of public health
- Or cover those who currently pay out-of-pocket for private health care for three years.

Argentina last spent \$54.8 billion dollars on Arms Imports (in 2010 constant USD).

With this money, the government could:

- Send over 45,000 students to tertiary school.
- Or send over 31,000 to secondary school.
- Or send over 48,000 children to primary school.
- Or cover the costs of little girls who are of age but out of primary school for 1 ½ years.

### Figures at a glance: Argentina

GDP (USD)	344.143 billion USD
Military Spending	8% GDP
Arms import (1990 USD constant)	32 million USD
Arms Imports 2010 USD	54.8 million USD
